- VS, Jira, Azure DevOps, SSMS, SSRS
- Certified Scrum Product Owner
- Business Analysis
- Application Development & Support
- Global Delivery Coordination
- Escalation Management
- Communication and Persuasive Leadership

## WORK EXPERIENCE

### Molina Healthcare - Senior Business Analyst

Aug. 2024 - Present

- Served as Product Owner, translating business needs into technical and operational requirements, ensuring alignment across stakeholders
- Led the expansion of the Care Coordination Portal, supporting providers across 22 states and multiple lines of business.
- Collaborated with cross-functional teams to identify process improvements, optimize workflows, and drive cost savings and revenue growth.
- Developed critical project documentation, including Business Requirements Documents (BRDs), Test Plans, RTM, and User Training materials.
- Actively participated in tech debt management, leading efforts to optimize data retrieval methods, significantly improving system response times and scalability.
- Spearheaded all phases of product development, from requirements gathering and design to testing and implementation, ensuring operational and functional objectives were met.
- Oversaw product deployment, ensuring seamless integration of new features for Member and Provider applications while optimizing customer digital experience.
- Leveraged prior developer experience and technical background in application management support to actively contribute to Command Center activities during outages/downtimes, ensuring swift issue resolution and minimizing service disruption during critical incidents.

### Infosys Inc. - Client: Molina Healthcare - Technology Analyst

Jan. 2021 - Present

- Co-managed an application management services team, handling escalations and maintenance activities for the portal, including incident resolution, problem identification, enhancements, change management, release, and configuration.
- Expertise in Agile-Scrum methodologies and full software development life cycle: requirements gathering, design, architecture review, development, code reviews, testing, security reviews, deployment, and maintenance.
- Designed and developed APIs for real-time retrieval of member & provider information from multiple sources, ensuring optimal performance.
- Gathered and analyzed business requirements and goals from multiple business stakeholders, pulling necessary data via SQL queries, Excel extracts, and other tools to provide meaningful insights and recommendations.
- Performed ad hoc reports and analyses and handled special project requests ensuring data accuracy to drive efficiency and reduce errors.
- Documented code, databases, and architecture (including data dictionaries, sequence and activity diagrams) to facilitate collaboration and knowledge transfer.
- Utilized presentation, persuasion, collaboration and leadership skills to achieve high customer/client satisfaction
- Managed a globally dispersed & diverse team to ensure the success of quality deliverables that meet project objectives, schedules, and budgets.

## EDUCATION

B.S. in Cognitive Sciences - University of California, Irvine

Sep. 2017 - Jun. 2020
